

QUICK REVIEW

Quick Review: Momentum and Collisions

— Algebra-Based

5-minute algebra-based review of momentum and collisions, emphasizing algebraic momentum, impulse, and collision problem solving.

 TIME 5 minutes	 BEST FOR Quick Review	 FINISH WITH Greater confidence
--	---	--

After this review, you'll be able to...

calculate momentum and impulse, solve one- and two-dimensional conservation problems, and distinguish elastic, inelastic, and perfectly inelastic collisions.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

YOU WILL NEED

Pencil or pen • Calculator if needed • Approximately 5 minutes

QR-02 • UNIT ALIGNMENT

Unit Alignment

This Physics Sensei Unit Review covers MEC-U07 — Momentum and Collisions using the Algebra-Based treatment. Use it to reinforce the unit, prepare for homework, or review before a quiz or exam.

UNIT ID: MEC-U07 UNIT: Momentum and Collisions TREATMENT: Algebra-Based RESOURCE: Unit Review	BEST USED ✓ After reading the chapter ✓ Before starting homework ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5 minutes

1 Quick Recall — page 4 Refresh what you already know.	2 Essential Idea — page 5 Review the most important concept.
3 Confidence Check — page 6 Confirm you're ready to move on.	4 Next Step — page 8 Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL**Recall Activity**

Complete the three statements from memory before revealing the answer.

1) $p = \underline{\hspace{1cm}}$. 2) $J = F_{avg} \Delta t = \underline{\hspace{1cm}}$. 3) For an isolated system, $\Sigma p_i = \underline{\hspace{1cm}}$.

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

Continue to Essential Idea — page 5 →

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA

System Momentum, Impulse, and Collision Constraints

For each object, $p = mv$. For an isolated system, $\Sigma p_i = \Sigma p_f$. In one dimension, use signed velocity components. In two dimensions, conserve x and y momentum separately. Momentum conservation applies to isolated collisions. In an elastic collision, kinetic energy is also conserved. In a perfectly inelastic collision, the objects share one final velocity. In other inelastic collisions, momentum is conserved but kinetic energy decreases.

$$p = mv; \quad J = F_{\text{avg}} \Delta t = \Delta p; \quad \Sigma p_i = \Sigma p_f$$

SENSEI NOTE Write one conservation equation per independent spatial component.

SENSEI NOTE Do not mix vector magnitude with a component. Keep directions and signs until the final vector is assembled.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

Continue to Confidence Check — page 6 →

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

Five-Minute Readiness Check

Answer without notes.

A 0.30 kg object changes velocity from +5.0 to -1.0 m/s. What is the impulse? Then state the condition for conserving total system momentum during a collision.

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Continue to Next Step — page 8 →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL

Recall Activity

1) mv ; 2) Δp ; 3) Σp_i .

WHY IT WORKS These statements connect the unit's central pattern: define the system, track vector momentum, and use impulse or conservation as appropriate.

CONFIDENCE CHECK

CONFIDENCE CHECK

Five-Minute Readiness Check

-1.8 N·s. Total system momentum is conserved when the net external impulse is negligible.

WHY IT WORKS $J = m(v_f - v_i) = 0.30(-1.0 - 5.0) = -1.8 \text{ N}\cdot\text{s}$. Conservation applies to the chosen system when external impulse can be neglected.

READINESS GUIDE

3 correct: You're ready to continue. • 2 correct: Review the missed idea. • 0–1 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.

? I'm Still Unsure Review the essential idea again. Review again: return to Essential Idea on page 5.	🕒 I Need More Practice Continue with additional practice for this topic. Go to Practice →	✓ I'm Ready Continue to the next recommended resource. Continue →
