

FOCUSED REVIEW

Focused Review: Simple Harmonic Motion

Review the most important simple harmonic motion ideas, reinforce the essential skills, and confirm you're ready to move on.

 TIME 15–20 minutes	 BEST FOR Focused review	 FINISH WITH Greater confidence
--	---	--

After this focused review, you'll be able to...

apply spring timing and energy relationships and use the small-angle pendulum model correctly.

HOW TO USE THIS GUIDE

Work through the stages in order. Write directly in the spaces provided, check your work in the Solutions section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

Physics Sensei is an independent educational resource designed to complement OpenStax materials. OpenStax® is a registered trademark of Rice University.

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these six focused stages in order. Each stage reinforces your understanding and prepares you for a final confidence check.

6 stages • Approximately 15–20 minutes

1 Warm-Up Check — page 4 Refresh key ideas.	2 Core Concepts — page 6 Reinforce the essentials.	3 Guided Practice — page 7 Strengthen key skills.
4 Confidence Check — page 8 Confirm your understanding.	5 Summary — page 10 Remember the essentials.	6 Next Step — page 14 Choose your next step.

PRINTING TIP

For student copies, print double-sided and keep the Solutions section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 6

Warm-Up Check

Before you begin, take a minute to reactivate what you already know. This quick warm-up will help you focus on the most important ideas before moving on.

WARM-UP 1**Key Ideas**

Recall the defining SHM rule.

Write the spring restoring-force equation.

WARM-UP 2**Common Mistakes**

Check the cycle quantities.

Connect T , f , and ω .

FR-04 • WARM-UP CHECK CONTINUED

WARM-UP 3

Quick Application

Recall the energy and pendulum limits.

Write total spring-oscillator energy.

Ready to strengthen your understanding?

You've refreshed the most important ideas. Now reinforce the concepts you'll use most often.

Continue to Core Concepts — page 6 →

FR-05 • STAGE 2 OF 6

Core Concepts

Let's reinforce the most important concepts you'll need to solve problems with confidence. Focus on the ideas that appear most often in homework, quizzes, and exams.

KEY CONCEPT 1

SHM model and cycle relationships

For a spring, $F = -kx$ gives $\omega = \sqrt{(k/m)}$ and $T = 2\pi\sqrt{(m/k)}$. Use $x = A \cos(\omega t + \phi)$, with $v_{\max} = A\omega$ and $a_{\max} = A\omega^2$.

$$F = -kx; \omega = \sqrt{(k/m)}; T = 2\pi/\omega; x = A \cos(\omega t + \phi)$$

EXAMPLE For $m = 0.50$ kg and $k = 200$ N/m, $\omega = 20$ rad/s and $T \approx 0.314$ s.

SENSEI NOTE Do not treat amplitude, velocity, and acceleration as quantities that peak at the same location in the cycle.

KEY CONCEPT 2

Energy and standard oscillators

For a spring, $E = \frac{1}{2}kA^2 = \frac{1}{2}mv^2 + \frac{1}{2}kx^2$. For a small-angle simple pendulum, $T \approx 2\pi\sqrt{(L/g)}$. Spring period is amplitude-independent in the ideal model; pendulum amplitude-independence is only approximate at small angle.

$$E = \frac{1}{2}mv^2 + \frac{1}{2}kx^2 = \frac{1}{2}kA^2; T_p \approx 2\pi\sqrt{(L/g)}$$

EXAMPLE For $k = 50$ N/m and $A = 0.10$ m, $E = 0.25$ J.

SENSEI NOTE Use the small-angle pendulum formula only after checking that the angular amplitude is sufficiently small for the intended accuracy.

Ready to apply these ideas?

You've reinforced the essential concepts. Now strengthen your problem-solving skills by working through a few guided examples.

Continue to Guided Practice — page 7 →

FR-06 • STAGE 3 OF 6

Guided Practice

Now apply the key concepts you've just reviewed. Work through these focused practice activities to reinforce your problem-solving skills before the final confidence check.

PRACTICE 1**Guided Example**

Solve one complete spring-cycle model.

A 0.25 kg mass on a 100 N/m spring oscillates with $A = 0.040$ m. Find T and $v_{\max}$.

PRACTICE 2**Independent Check**

Use energy or the small-angle pendulum relation.

A spring has $k = 60$ N/m and $A = 0.12$ m. Find total energy.

Ready for a confidence check?

You've reinforced the essential skills through focused practice. Now confirm your understanding with two short questions.

Continue to Confidence Check — page 8 →

FR-07 • STAGE 4 OF 6

Confidence Check

You've reinforced the key concepts and practiced the essential skills. Now confirm you're ready to move forward by completing these short confidence checks.

CONFIDENCE CHECK 1

SHM readiness check

Answer without a calculator.

If m quadruples with k fixed, what happens to T ?

CONFIDENCE CHECK 2

Energy and pendulum check

State one reason with each answer.

Does the ideal spring period depend on amplitude?

HOW DID IT GO?

I answered ____ of 2 questions correctly.

Use the Solutions section to check your reasoning, then take one final look at the essential ideas.

You've confirmed your understanding.

Take one final look at the essential ideas before choosing your next step.

[Continue to Summary — page 10 →](#)

FR-08 • STAGE 5 OF 6

Summary

Before moving on, take one final look at the essential ideas you'll want to remember.

KEY TAKEAWAY 1

Restoring law + phase tells the cycle

Verify $a \propto -x$, then use ω , T , f , and the x - v - a phase relationships. Turning points: $v = 0$. Equilibrium: $|v|$ maximum.

KEY TAKEAWAY 2

Energy and approximation choose the model

For ideal springs use $E = \frac{1}{2}kA^2$. For pendulums, use the SHM period only under the small-angle approximation.

MY ONE-SENTENCE SUMMARY

In my own words, the most important idea is:

Ready for your next step?

You've reviewed the essential ideas one last time. Now choose the resource that best matches how confident you feel.

Continue to Next Step — page 14 →

ANSWER KEY • CHECK AFTER ATTEMPTING

Solutions and Explanations

Use these solutions to check your reasoning—not only your final answer. Use each answer and explanation to check both the setup and the physical interpretation.

WARM-UP • ACTIVITY 1

Key Ideas

$$F = -kx.$$

WHY IT WORKS The essential test is a restoring acceleration proportional to $-$ displacement.

WARM-UP • ACTIVITY 2

Common Mistakes

$$f = 1/T \text{ and } \omega = 2\pi f = 2\pi/T.$$

WHY IT WORKS Displacement, velocity, and acceleration have fixed phase relationships in ideal SHM.

WARM-UP • ACTIVITY 3

Quick Application

$$E = \frac{1}{2}mv^2 + \frac{1}{2}kx^2 = \frac{1}{2}kA^2.$$

WHY IT WORKS Energy and the small-angle approximation provide two fast ways to check an SHM model.

SOLUTIONS • GUIDED PRACTICE

PRACTICE 1

Guided Example

$$T = 2\pi\sqrt{(0.25/100)} \approx 0.314 \text{ s}; v_{\max} = A\sqrt{(k/m)} = 0.80 \text{ m/s}.$$

WHY IT WORKS Use the restoring law first, then cycle relations; do not mix turning-point and equilibrium properties.

PRACTICE 2

Independent Check

$$E = \frac{1}{2}(60)(0.12)^2 = 0.432 \text{ J}.$$

WHY IT WORKS Energy is often the fastest route when position and speed are related; the pendulum requires an explicit approximation.

SOLUTIONS • CONFIDENCE CHECK

CONFIDENCE CHECK 1

SHM readiness check

T doubles.

WHY IT WORKS Use $a = -\omega^2 x$ and $T \propto \sqrt{m}$ for an ideal spring oscillator.

CONFIDENCE CHECK 2

Energy and pendulum check

No.

WHY IT WORKS Turning points have $v = 0$; ideal linear-spring frequency depends on k and m ; pendulum SHM requires small-angle linearization.

READINESS GUIDE

2 correct: You're ready to continue. • 1 correct: Review the missed idea, then continue. • 0 correct: Revisit Core Concepts or choose more practice.

FR-09 • STAGE 6 OF 6

Next Step: Continue Learning

Great work! You've completed this focused review. Choose the next resource that best matches how confident you feel.

? I'm Still Unsure Review the focused review again to strengthen the essential concepts. Review again: return to Warm-Up Check on page 4.	🕒 I Need More Practice Build confidence with additional practice problems.
