

QUICK REVIEW

Quick Review — Acceleration and Constant-Acceleration Motion — Calculus-Based

Refresh the most important ideas, formulas, and problem-solving strategies for Acceleration and Constant-Acceleration Motion in just a few minutes.

 TIME 5–10 minutes	 BEST FOR A rapid refresh	 FINISH WITH Key ideas refreshed
--	---	--

After this quick review, you'll be able to...

quickly recall the essential concepts, formulas, and problem-solving strategies needed to move forward with confidence.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

YOU WILL NEED

Pencil or pen • Calculator if needed • Approximately 5–10 minutes

FR-02 • COURSE ALIGNMENT

Course Alignment

This Physics Sensei Topic Review is an independent learning resource. Use it to reinforce key concepts, prepare for homework, or review before a quiz or exam.

Related Unit Review: If you need to review the complete unit material, review [Motion in One Dimension here →](#)

RESOURCE: Physics Sensei Topic Review
TOPIC ID: MEC-U03-T02
TOPIC: Acceleration and Constant-Acceleration Motion
PARENT UNIT: MEC-U03 — Motion in One Dimension
COURSE LEVEL: Calculus-Based

BEST USED

- ✓ After learning the topic
- ✓ Before starting homework
- ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5–10 minutes

1 Quick Recall Refresh what you already know.	2 Essential Idea Review the most important concept.
3 Confidence Check Confirm you're ready to move on.	4 Next Step Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL

Recall Activity

State the differential definition of acceleration and explain what constant acceleration implies for the shape of $v(t)$.

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

Review the Essential Idea →

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA**Acceleration as the Time Derivative of Velocity**

Instantaneous acceleration is the rate at which velocity changes with time. In one dimension, its sign is determined by the local slope of the velocity–time graph.

When acceleration is constant, integrating once makes velocity linear in time; integrating again makes position quadratic in time.

$$a = dv/dt$$

EXAMPLE If $v(t) = 3 + 2t$ in SI units, then $a = +2 \text{ m/s}^2$ at every time.

SENSEI NOTE At a turning point, v can be zero while a is nonzero. Zero velocity does not imply zero acceleration.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

Start the Confidence Check →

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

From Velocity to Acceleration

Differentiate with respect to time.

If $v(t) = 4 - 3t$ in SI units, what is $a(t)$, and at what time does the particle reverse direction?

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Choose Your Next Step →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL**Recall Activity**

$a = dv/dt$. Constant a means dv/dt is constant, so $v(t)$ is a straight line in time with slope a .

WHY IT WORKS Differentiation gives the local rate of velocity change; a constant derivative produces a linear function.

CONFIDENCE CHECK**CONFIDENCE CHECK****From Velocity to Acceleration**

$a(t) = -3 \text{ m/s}^2$. Set $v = 0$: $4 - 3t = 0$, so $t = 4/3 \text{ s}$.

WHY IT WORKS The sign change in v marks the reversal; acceleration stays constant through the turning instant.

READINESS GUIDE

1 correct: You're ready to continue. • 0 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.
