

QUICK REVIEW

Quick Review: Angular Momentum and Conservation

Refresh the most important ideas, formulas, and problem-solving strategies for angular momentum and conservation in just a few minutes.

 TIME 5–10 minutes	 BEST FOR A rapid refresh	 FINISH WITH Key ideas refreshed
--	---	--

After this quick review, you'll be able to...

explain angular momentum, recognize the conservation condition, and apply calculus-based relationships with confidence.

quickly recall the essential concepts, formulas, and problem-solving strategies needed to move forward with confidence.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

YOU WILL NEED

Pencil or pen • Calculator if needed • Approximately 5–10 minutes

FR-02 • COURSE ALIGNMENT

Course Alignment

This Physics Sensei Unit Review is an independent learning resource. Use it to reinforce key concepts, prepare for homework, or review before a quiz or exam.

RESOURCE: Physics Sensei Unit Review
UNIT ID: MEC-U21
TOPIC: Angular Momentum and Conservation
COURSE LEVEL: Calculus-Based

BEST USED

- ✓ After learning the unit
- ✓ Before starting homework
- ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5–10 minutes

1 Quick Recall Refresh what you already know.	2 Essential Idea Review the most important concept.
3 Confidence Check Confirm you're ready to move on.	4 Next Step Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL

Recall Activity

For a particle, $L = r \times p$. The general rotational law is $\tau_{\text{ext}} = dL/dt$. If net external torque is zero, the total angular-momentum vector is constant. For fixed-axis rotation, $L = I\omega$.

$$L = r \times p; \tau_{\text{ext}} = dL/dt; \Delta L = \int \tau_{\text{ext}} dt; \text{fixed axis: } L = I\omega.$$

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

[Review the Essential Idea →](#)

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA

Torque Governs the Time Rate of Change of L

Angular momentum is a vector defined relative to an origin: $L = r \times p$. The general law is $\tau_{\text{ext}} = dL/dt$. Therefore zero net external torque makes the total angular-momentum vector constant.

$$L = r \times p; \tau_{\text{ext}} = dL/dt; \Delta L = \int \tau_{\text{ext}} dt; \text{fixed axis: } L = I\omega.$$

EXAMPLE If I changes from 3.0 to 1.5 kg·m² while $\omega_{\text{initial}}=4.0$ rad/s, then $\omega_{\text{final}}=8.0$ rad/s.

SENSEI NOTE Do not reduce a three-dimensional vector problem to scalar $I\omega$ unless the axis justifies it.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

[Start the Confidence Check →](#)

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

One-Minute Check

If $\tau_{\text{ext}} = 0$ for a closed rotating system, what is dL/dt and what follows for L ?

$L = r \times p$; $\tau_{\text{ext}} = dL/dt$; $\Delta L = \int \tau_{\text{ext}} dt$; fixed axis: $L = I\omega$.

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Choose Your Next Step →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL**Recall Activity**

Angular momentum is conserved when net external torque about the chosen axis is zero or negligible.

WHY IT WORKS The torque condition determines whether the system exchanges angular momentum with its surroundings.

CONFIDENCE CHECK**CONFIDENCE CHECK****One-Minute Check**

$dL/dt = 0$; the total angular-momentum vector is constant.

WHY IT WORKS This follows directly from $\tau_{\text{ext}} = dL/dt$.

READINESS GUIDE

1 correct: You're ready to continue. • 0 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.
