

QUICK REVIEW

Quick Review: Heat, Specific Heat, and Calorimetry

Refresh the most important ideas, formulas, and problem-solving strategies for heat, specific heat, and calorimetry in just a few minutes.

 TIME 5–10 minutes	 BEST FOR A rapid refresh	 FINISH WITH Key ideas refreshed
--	---	--

After this quick review, you'll be able to...

quickly recall the essential concepts, formulas, and problem-solving strategies needed to move forward with confidence.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

YOU WILL NEED

Pencil or pen • Calculator if needed • Approximately 5–10 minutes

FR-02 • COURSE ALIGNMENT

Course Alignment

This Physics Sensei Unit Review is an independent learning resource. Use it to reinforce key concepts, prepare for homework, or review before a quiz or exam.

RESOURCE: Physics Sensei Unit Review
UNIT ID: THM-U03
TOPIC: Heat, Specific Heat, and Calorimetry
COURSE LEVEL: Foundational Physics

BEST USED

- ✓ After learning the unit
- ✓ Before starting homework
- ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5–10 minutes

1 Quick Recall Refresh what you already know.	2 Essential Idea Review the most important concept.
3 Confidence Check Confirm you're ready to move on.	4 Next Step Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL

Meaning Match

Complete the activity, then check your reasoning in the answers.

Match each idea with its meaning.

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

Review the Essential Idea →

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA**Heat, Specific Heat, and Calorimetry**

Heat is energy transferred because of a temperature difference. For a substance that stays in one phase, the energy needed for a temperature change depends on its mass, specific heat, and temperature change. In an insulated calorimetry system, energy released and absorbed must balance, so the algebraic sum of heat transfers is zero.

$$Q = mc\Delta T; \text{ for insulated calorimetry, } \Sigma Q = 0$$

EXAMPLE $Q = mc\Delta T$. A larger mass or larger specific heat requires more energy for the same ΔT .

SENSEI NOTE Choose signs from temperature change: warming gives $\Delta T > 0$ and cooling gives $\Delta T < 0$.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

Start the Confidence Check →

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

Energy Balance

Answer before checking the solution.

In an insulated cup, a hot object loses 600 J. How much heat does the cooler material gain?

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Choose Your Next Step →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL**Meaning Match**

heat → energy transferred; specific heat → energy needed per kilogram per degree; calorimetry → using energy balance to study heat exchange

WHY IT WORKS These three ideas organize nearly every calorimetry problem.

CONFIDENCE CHECK**CONFIDENCE CHECK****Energy Balance**

It gains 600 J, so Q (cold) = +600 J.

WHY IT WORKS Energy conservation requires the transfers to be equal in magnitude and opposite in sign.

READINESS GUIDE

1 correct: You're ready to continue. • 0 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.
