

## FOCUSED REVIEW

# Focused Review — Newton's Laws of Motion — Algebra-Based

Review the most important ideas, reinforce the essential skills, and confirm you're ready to move on.

|                                                                                                                   |                                                                                                                        |                                                                                                                                 |

**After this focused review, you'll be able to...**

recognize the key concepts, reinforce your problem-solving skills, and continue with greater confidence.

**HOW TO USE THIS GUIDE**

Work through the stages in order. Write directly in the spaces provided, check your work in the Solutions section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

[Watch the Video Review →](#)

**YOU WILL NEED**

Pencil or pen • Calculator if needed • Approximately 15–20 minutes

## FR-02 • COURSE ALIGNMENT

## Course Alignment

This Physics Sensei Topic Review is an independent learning resource. Use it to reinforce key concepts, prepare for homework, or review before a quiz or exam.

Related Unit Review: If you need to review the complete unit material, review Newton's Laws and Free-Body Diagrams here → <https://physicssensei.com/focused-unit-review-newtons-laws-and-free-body-diagrams-algebra-based/>

RESOURCE: Physics Sensei Topic Review  
TOPIC ID: MEC-U05-T01  
TOPIC: Newton's Laws of Motion  
PARENT UNIT: MEC-U05 — Newton's Laws and Free-Body Diagrams  
COURSE LEVEL: Algebra-Based

**BEST USED**

- ✓ After learning the topic
- ✓ Before starting homework
- ✓ Before a quiz or exam

## FR-03 • YOUR REVIEW PLAN

## Your Review Plan

Complete these six focused stages in order. Each stage reinforces your understanding and prepares you for a final confidence check.

6 stages • Approximately 15–20 minutes

|                                                                    |                                                               |                                                              |

| <b>4</b><br><b>Confidence Check</b><br>Confirm your understanding. | <b>5</b><br><b>Summary</b><br>Remember the essentials.        | <b>6</b><br><b>Next Step</b><br>Choose your next step.       |

**PRINTING TIP**

For student copies, print double-sided and keep the Solutions section after the student activities so learners attempt each activity before checking their work.

## FR-04 • STAGE 1 OF 6

# Warm-Up Check

Before you begin, take a minute to reactivate what you already know. This quick warm-up will help you focus on the most important ideas before moving on.

**WARM-UP 1****Key Ideas**

Answer before revealing the response.

*Write the condition for translational equilibrium and state what it means for acceleration.*

---

**WARM-UP 2****Common Mistakes**

Answer before revealing the response.

A 5 kg object has forces of 20 N right and 20 N left. Find its acceleration.

---

## FR-04 • WARM-UP CHECK CONTINUED

## WARM-UP 3

**Quick Application**

Answer before revealing the response.

*A hand pushes a box. Name the Newton's third-law partner to the force of the hand on the box.*

**Ready to strengthen your understanding?**

You've refreshed the most important ideas. Now reinforce the concepts you'll use most often.

**Continue to Core Concepts →**

## FR-05 • STAGE 2 OF 6

# Core Concepts

Let's reinforce the most important concepts you'll need to solve problems with confidence. Focus on the ideas that appear most often in homework, quizzes, and exams.

**KEY CONCEPT 1****Net Force and Newton's First/Second Laws**

Choose one object, draw only the external forces on it, and add force components. Newton's first law corresponds to zero net force; Newton's second law gives the acceleration when the net force is nonzero.

$$\Sigma \mathbf{F} = 0 \rightarrow \mathbf{a} = 0$$

EXAMPLE Check the net force on one chosen object before deciding how its motion changes.

SENSEI NOTE Constant velocity means zero acceleration; it does not require the object to be at rest.

**KEY CONCEPT 2****Newton's Third Law: Interaction Pairs**

An interaction produces two forces with equal magnitude and opposite direction. Keep the object labels explicit so a third-law pair is not confused with two forces that happen to balance on one object.

$$\Sigma \mathbf{F} = m \mathbf{a}$$

EXAMPLE Use object labels on interaction forces so third-law partners stay on different free-body diagrams.

SENSEI NOTE Do not pair weight and normal force as a third-law pair; both can act on the same object.

**Ready to apply these ideas?**

You've reinforced the essential concepts. Now strengthen your problem-solving skills by working through a few guided examples.

[Continue to Guided Practice →](#)

## FR-06 • STAGE 3 OF 6

## Guided Practice

Now apply the key concepts you've just reviewed. Work through these focused practice activities to reinforce your problem-solving skills before the final confidence check.

**PRACTICE 1****Guided Example**

Work through the force inventory, net-force step, and motion conclusion.

*A 10 kg crate is pulled right by 50 N while friction is 20 N left. Find the net force and acceleration.*

---

**PRACTICE 2****Independent Check**

Solve independently, showing the net-force reasoning.

*A 60 kg skater pushes a 40 kg skater with 120 N. Find the force on each skater and the magnitude of each acceleration.*

---

**Ready for a confidence check?**

You've reinforced the essential skills through focused practice. Now confirm your understanding with two short questions.

**Continue to Confidence Check →**

FR-07 • STAGE 4 OF 6

# Confidence Check

You've reinforced the key concepts and practiced the essential skills. Now confirm you're ready to move forward by completing these short confidence checks.

**CONFIDENCE CHECK 1****Newton's Laws Check 1**

Solve and justify your conclusion.

*A 6.0 kg object has 30 N east and 12 N west. Find its acceleration.*

---

**CONFIDENCE CHECK 2****Newton's Laws Check 2**

Solve and justify your conclusion.

*Earth pulls downward on a falling ball. State the third-law partner force.*

---

**HOW DID IT GO?**

**I answered \_\_\_\_ of 2 questions correctly.**

Use the Solutions section to check your reasoning, then take one final look at the essential ideas.

**You've confirmed your understanding.**

Take one final look at the essential ideas before choosing your next step.

**Continue to Summary →**

## FR-08 • STAGE 5 OF 6

## Summary

Before moving on, take one final look at the essential ideas you'll want to remember.

**KEY TAKEAWAY 1**

**Net force determines whether velocity changes.**

Net force determines whether velocity changes.

**KEY TAKEAWAY 2**

**Third-law forces act on different objects.**

Third-law forces act on different objects.

**MY ONE-SENTENCE SUMMARY**

In my own words, the most important idea is:

**Ready for your next step?**

You've reviewed the essential ideas one last time. Now choose the resource that best matches how confident you feel.

**Continue to Next Step →**

## ANSWER KEY • CHECK AFTER ATTEMPTING

# Solutions and Explanations

Use these solutions to check your reasoning—not only your final answer. Replace each placeholder with a concise answer and the essential explanation.

## WARM-UP • ACTIVITY 1

## Key Ideas

$\Sigma \mathbf{F} = 0$ , so  $\mathbf{a} = 0$ .

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## WARM-UP • ACTIVITY 2

## Common Mistakes

The forces cancel:  $F_{\text{net}} = 0$ , so  $\mathbf{a} = 0$ .

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## WARM-UP • ACTIVITY 3

## Quick Application

The box exerts an equal-magnitude, opposite-direction force on the hand.

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## SOLUTIONS • GUIDED PRACTICE

## PRACTICE 1

**Guided Example**

$$F_{\text{net}} = 50 - 20 = 30 \text{ N right}; a = 30/10 = 3.0 \text{ m/s}^2 \text{ right.}$$

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## PRACTICE 2

**Independent Check**

The forces are 120 N in opposite directions. Accelerations:  $2.0 \text{ m/s}^2$  for 60 kg and  $3.0 \text{ m/s}^2$  for 40 kg.

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## SOLUTIONS • CONFIDENCE CHECK

## CONFIDENCE CHECK 1

**Newton's Laws Check 1**

$F_{\text{net}} = 18 \text{ N east}$ ;  $a = 18/6.0 = 3.0 \text{ m/s}^2 \text{ east}$ .

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## CONFIDENCE CHECK 2

**Newton's Laws Check 2**

The ball pulls upward on Earth with equal force magnitude.

WHY IT WORKS The result follows by isolating one object and applying the net-force rule or the correct interaction pair.

## READINESS GUIDE

2 correct: You're ready to continue. • 1 correct: Review the missed idea, then continue. • 0 correct: Revisit Core Concepts or choose more practice.

FR-09 • STAGE 6 OF 6

## Next Step: Continue Learning

Great work! You've completed this focused review. Choose the next resource that best matches how confident you feel.
