

QUICK REVIEW

Quick Review — Position, Displacement, and Velocity — Foundational

Refresh the most important ideas, formulas, and problem-solving strategies for Position, Displacement, and Velocity in just a few minutes.

 TIME 5–10 minutes	 BEST FOR A rapid refresh	 FINISH WITH Key ideas refreshed
--	---	--

After this quick review, you'll be able to...

quickly recall the essential concepts, formulas, and problem-solving strategies needed to move forward with confidence.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

RESOURCE: Physics Sensei Topic Review
TOPIC ID: MEC-U03-T01
TOPIC: Position, Displacement, and Velocity
PARENT UNIT: MEC-U03 — Motion in One Dimension
COURSE LEVEL: Foundational introductory physics

BEST USED

- ✓ After learning the topic
- ✓ Before starting homework
- ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5–10 minutes

1 Quick Recall Refresh what you already know.	2 Essential Idea Review the most important concept.
3 Confidence Check Confirm you're ready to move on.	4 Next Step Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL

Recall Activity

A cart is at $x = +2$ m and later at $x = -3$ m. Is its final position the same thing as its displacement? State both.

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

Review the Essential Idea →

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA**Position tells where; displacement tells what changed**

Position locates an object relative to a chosen origin and positive direction. Displacement compares the final position with the initial position, so its sign tells the direction of the net change. Distance traveled and displacement are different: distance counts the path length, while displacement depends only on the endpoints.

$$\Delta x = x_2 - x_1; \text{ average velocity} = \text{displacement} \div \text{elapsed time}$$

EXAMPLE From $x_1 = +2 \text{ m}$ to $x_2 = -3 \text{ m}$, the final position is -3 m and the displacement is -5 m .

SENSEI NOTE Choose the origin and positive direction first. A negative displacement is a direction, not a “wrong” answer.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

Start the Confidence Check →

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

Direction from the sign

Use the chosen positive direction.

A cart moves from $x = -4$ m to $x = +1$ m in 5 s. What is its displacement, and is its average velocity positive or negative?

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Choose Your Next Step →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL**Recall Activity**

Final position: -3 m. Displacement: -5 m.

WHY IT WORKS Position is a location. Displacement is the signed change from the starting position to the ending position.

CONFIDENCE CHECK**CONFIDENCE CHECK****Direction from the sign**

The displacement is $+5$ m, so the average velocity is positive.

WHY IT WORKS The final position is 5 m to the positive side of the initial position; dividing by a positive elapsed time preserves that sign.

READINESS GUIDE

1 correct: You're ready to continue. • 0 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.

 I'm Still Unsure Review the essential idea again. Review Again →	 I Need More Practice Continue with additional practice for this topic. Go to Practice →	 I'm Ready Continue to the next recommended resource. Continue →
