

QUICK REVIEW

Quick Review: Temperature and Thermal Equilibrium

Refresh the most important ideas, formulas, and problem-solving strategies for Temperature and Thermal Equilibrium in just a few minutes.

 TIME 5–10 minutes	 BEST FOR A rapid refresh	 FINISH WITH Key ideas refreshed
--	---	--

After this quick review, you'll be able to...

quickly recall the essential concepts, formulas, and problem-solving strategies needed to move forward with confidence.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

YOU WILL NEED

Pencil or pen • Calculator if needed • Approximately 5–10 minutes

FR-02 • COURSE ALIGNMENT

Course Alignment

This Physics Sensei Unit Review is an independent learning resource. Use it to reinforce key concepts, prepare for homework, or review before a quiz or exam.

RESOURCE: Physics Sensei Unit Review
UNIT ID: THM-U01
TOPIC: Temperature and Thermal Equilibrium
COURSE LEVEL: Algebra-Based College Physics

BEST USED

- ✓ After learning the unit
- ✓ Before starting homework
- ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5–10 minutes

1 Quick Recall Refresh what you already know.	2 Essential Idea Review the most important concept.
3 Confidence Check Confirm you're ready to move on.	4 Next Step Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL

Recall Activity

Match each relationship to Celsius, Fahrenheit, kelvin, or thermal equilibrium.

A. Add 273.15. B. Multiply Celsius by 9/5 and add 32. C. Equal temperature and no net heat transfer. D. Absolute temperature scale.

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

Review the Essential Idea →

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA**Temperature Scales and Equilibrium**

Temperature scales are related by linear conversions. Use kelvin for absolute temperature and Celsius or Fahrenheit when the problem calls for those scales. Thermal equilibrium is reached when interacting systems have equal temperatures, regardless of which valid scale reports them.

$$T(\text{K}) = T(^{\circ}\text{C}) + 273.15; \quad T(^{\circ}\text{F}) = (9/5)T(^{\circ}\text{C}) + 32$$

EXAMPLE $20^{\circ}\text{C} = 293.15\text{ K} = 68^{\circ}\text{F}$.

SENSEI NOTE Convert the temperature value, but a change of 1°C equals a change of 1 K.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

Start the Confidence Check →

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

Convert and Interpret

Convert the value and state the transfer direction.

Object A is at 68 °F and object B is at 10 °C. Convert A to Celsius and predict the initial heat-transfer direction.

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Choose Your Next Step →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL**Recall Activity**

A: Celsius to kelvin. B: Celsius to Fahrenheit. C: thermal equilibrium. D: kelvin.

WHY IT WORKS The equations distinguish offsets, scale factors, and the physical equilibrium condition.

CONFIDENCE CHECK**CONFIDENCE CHECK****Convert and Interpret**

68 °F = 20 °C. Heat transfers from A at 20 °C to B at 10 °C.

WHY IT WORKS Comparing values on the same scale makes the higher-temperature direction clear.

READINESS GUIDE

1 correct: You're ready to continue. • 0 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.

? I'm Still Unsure Review the essential idea again. Review Again →	🎯 I Need More Practice Continue with additional practice for this topic. Go to Practice →	✓ I'm Ready Continue to the next recommended resource. Continue →
