

QUICK REVIEW

Quick Review: Thermodynamic Processes and PV Diagrams — Algebra-Based

Refresh the most important ideas, formulas, and problem-solving strategies for Thermodynamic Processes and PV Diagrams in just a few minutes.

 TIME 5–10 minutes	 BEST FOR A rapid refresh	 FINISH WITH Key ideas refreshed
--	---	--

After this quick review, you'll be able to...

quickly recall the essential concepts, formulas, and problem-solving strategies needed to move forward with confidence.

HOW TO USE THIS GUIDE

Work through the four stages in order. Write directly in the spaces provided, check your work in the Quick Answers section, and finish by choosing the next resource that matches your confidence.

Choose how you want to review: work through this guide, follow the online review, or watch the video review.

YOU WILL NEED

Pencil or pen • Calculator if needed • Approximately 5–10 minutes

FR-02 • COURSE ALIGNMENT

Course Alignment

This Physics Sensei Unit Review is an independent learning resource. Use it to reinforce key concepts, prepare for homework, or review before a quiz or exam.

RESOURCE: Physics Sensei Unit Review
UNIT ID: THM-U09
TOPIC: Thermodynamic Processes and PV Diagrams
COURSE LEVEL: Algebra-Based

BEST USED

- ✓ After learning the unit
- ✓ Before starting homework
- ✓ Before a quiz or exam

FR-03 • YOUR REVIEW PLAN

Your Review Plan

Complete these four stages to quickly refresh the essential ideas and confirm you're ready to continue.

4 stages • Approximately 5–10 minutes

1 Quick Recall Refresh what you already know.	2 Essential Idea Review the most important concept.
3 Confidence Check Confirm you're ready to move on.	4 Next Step Continue your learning.

PRINTING TIP

For student copies, print double-sided and keep the Quick Answers section after the student activities so learners attempt each activity before checking their work.

FR-04 • STAGE 1 OF 4

Quick Recall

Let's quickly refresh what you already know. This short recall activity will bring the most important ideas back to mind before you review them.

QUICK RECALL**Recall Activity**

Recall the process constraints and the work rule used on P–V diagrams.

Write the defining condition for isochoric, isobaric, isothermal, and adiabatic processes. Then write the work for a constant-pressure volume change.

Ready to refresh the essentials?

Great! Now review the most important idea you'll want to remember.

Review the Essential Idea →

FR-05 • STAGE 2 OF 4

Essential Idea

Take one last look at the most important concept from this topic. If you remember this idea, the rest will come back much more easily.

ESSENTIAL IDEA**Use the constraint first, then the P–V area**

Thermodynamic process equations become simpler once you identify what is held fixed. On a P–V diagram, work by the gas is the signed area under the path. For a horizontal constant-pressure segment, that area is a rectangle.

At constant pressure: $W = P\Delta V$; on a P–V diagram, signed area under the path equals work by the gas.

EXAMPLE At $P = 1.5 \times 10^5 \text{ Pa}$, expansion from 2.0 L to 5.0 L gives $\Delta V = 3.0 \times 10^{-3} \text{ m}^3$ and $W = 450 \text{ J}$.

SENSEI NOTE Convert liters to cubic meters before multiplying pressure by volume change: $1 \text{ L} = 10^{-3} \text{ m}^3$.

Ready to check your memory?

You've refreshed the essential idea. Now see how much you remember before moving on.

Start the Confidence Check →

FR-06 • STAGE 3 OF 4

Confidence Check

You've refreshed the essential idea. Now answer this quick confidence check to confirm you're ready to move on.

CONFIDENCE CHECK

Constant-pressure work

Calculate the work by the gas.

A gas expands at $2.0 \times 10^5 \text{ Pa}$ from 1.0 L to 4.0 L. What is W ?

Ready for your next step?

Great work! You've refreshed the essential idea. Now choose the resource that best matches what you'd like to do next.

Choose Your Next Step →

QUICK ANSWERS • CHECK AFTER ATTEMPTING

Quick Answers and Explanations

Use these concise answers to check your recall and confidence—not only your final response.

QUICK RECALL

Recall Activity

Isochoric: $\Delta V = 0$. Isobaric: $\Delta P = 0$. Isothermal: $\Delta T = 0$. Adiabatic: $Q = 0$. At constant pressure, $W = P\Delta V$.

WHY IT WORKS The constraint identifies the process, and $W = P\Delta V$ is the rectangular area under a horizontal P–V path.

CONFIDENCE CHECK

CONFIDENCE CHECK

Constant-pressure work

$\Delta V = 3.0 \times 10^{-3} \text{ m}^3$, so $W = P\Delta V = 600 \text{ J}$.

WHY IT WORKS A rightward horizontal path is constant-pressure expansion, so its rectangular P–V area is positive.

READINESS GUIDE

1 correct: You're ready to continue. • 0 correct: Revisit the Essential Idea or choose more practice.

FR-07 • STAGE 4 OF 4

Next Step: Continue Learning

Great work! You've completed this quick review. Choose the next resource that best matches how confident you feel.
